the customer's payment information should be taken and the transaction processed on this page, the next page should be the order review.

the order summary should display both taxes and shipping, since the customer already input their zipcode in the shopping cart.

these two boxes should not be separate, but one entire order summary

the YMM Search Bar should not appear in the checkout screen

reduce these gaps to save space

the zip code text box should automatically use the same zip code the user input from the cart. if the user decides to change their zip code, the shipping should be recalculated based on the cheapest option
